

Product Requirements Document

Take Your Trip (tytluxe.in) — Travel Agency Booking Platform

Version: 1.0 (Draft) **Owner:** [Your name], Product Manager **Status:** Draft for review **Last updated:** July 25, 2026

1. Website Overview

Take Your Trip is a travel agency website offering curated Hotels, Flights, Cruises, Staycations, and Package deals, with a focus on transparent pricing and personal support (call/WhatsApp: 98750 73788).

Current state: A static WordPress/Elementor site (tytluxe.in) exists today with the target navigation already in place (Home, About, Hotels, Flights, Cruises, Staycation, Offers, Contact), brand identity, testimonials, and a WooCommerce-style cart/checkout shell. It is currently a marketing/brochure site — content is illustrative, not connected to live inventory, pricing, or booking.

Vision for this PRD: Evolve the static brochure site into a functional travel booking platform where users can search, compare, enquire about, and (in later phases) book Hotels, Flights, Cruises, Staycations, and Packages, while preserving the "curated, high-touch, boutique agency" positioning (as opposed to a bare-bones OTA like MakeMyTrip/Yatra).

Positioning: A boutique travel agency, not a mass-market OTA. Differentiators to protect in every feature decision: curated inventory (hand-picked, not everything on the market), zero hidden fees, human support via call/WhatsApp, and best-fare guarantee.

2. Target Users

Segment	Description	Primary Need
Leisure travelers (families/couples)	Booking domestic/international holidays, honeymoons, staycations	Curated options, trustworthy pricing, easy comparison
Cruise-first travelers	Niche segment actively researching cruises (an underserved category vs. mainstream OTAs)	Detailed cruise info, cabin types, itineraries
Deal-seekers	Price-sensitive, drawn in by the Offers page	Clear, time-bound, credible discounts
High-touch / low-digital-confidence travelers	Prefer to finalize via phone/WhatsApp rather than self-serve checkout	Fast human response, WhatsApp-first flow
Corporate/group bookers (secondary)	Booking for events, honeymoons, family groups	Custom packages, agent-assisted quotes

Out of scope for v1: Backpacker/budget self-serve segment expecting Skyscanner-style radical price transparency across every airline; this product is agent-curated, not a full aggregator.

3. Problem Statement

Take Your Trip has a well-designed brand and static presence but currently cannot convert visitor interest into leads or bookings:

1. **No live inventory or pricing** — Hotels, Flights, Cruises, and Staycation pages show illustrative categories, not real, bookable listings.
2. **No structured enquiry/booking flow** — visitors must call or WhatsApp manually; there's no in-site way to specify dates, travelers, or destination and get a quote.
3. **No lead capture system** — interested visitors who aren't ready to call have no way to leave details for follow-up.
4. **Offers aren't dynamic** — "Limited Time Offers" is static content with no way to manage, expire, or personalize deals.
5. **No account/booking history** — returning customers can't view past enquiries or bookings.
6. **Cart/checkout exists but is disconnected** — a WooCommerce-style cart is present but not wired to real travel products, creating a broken/confusing experience if a user reaches it today.

Net result: The site currently functions as a digital business card rather than a lead- or revenue-generating channel.

4. Core Features (Full Vision)

4.1 Hotels

- Search by destination, check-in/out dates, guests, rooms
- Filter by category (Beach Resort, City Luxury, Honeymoon, Family Friendly — categories already exist on site)
- Hotel detail page: photos, amenities, room types, cancellation policy, price
- "Best Fare Guarantee" messaging tied to real comparison logic or manual agent review

4.2 Flights

- Search by origin, destination, dates, passengers, class
- Display fare options (or "request a quote" if not doing live GDS integration in v1)
- One-way / round-trip / multi-city toggle

4.3 Cruises

- Browse by category (Scenic Getaways, Luxury Cruises, International Cruises)
- Cruise detail page: itinerary, ports of call, cabin types, duration, cruise line
- Enquiry form for cabin selection (cruises are complex to fully self-serve; agent-assisted is realistic for v1)

4.4 Staycation

- Curated short-break packages near major cities
- Filter by duration, budget, amenities (pool, spa, pet-friendly)

4.5 Packages & Offers

- Pre-built packages (e.g., "5N/6D Bali Honeymoon Package") bundling flight+hotel+activities
- Offers page with time-bound deals, expiry countdown, "Offer valid till" dates
- Ability for admin to add/edit/expire offers without a developer

4.6 Cross-cutting features

- **Enquiry/Quote Request flow** — every product (hotel, flight, cruise, package) has a "Request a Quote" or "Enquire Now" CTA capturing name, phone, email, travel dates, pax count
- **WhatsApp Click-to-Chat** — pre-filled message with the product name/dates (already partially present via the WhatsApp link)

- **Lead management (admin/back-end)** — enquiries land in a dashboard or CRM/email so agents can follow up
 - **Search & filter** across all verticals
 - **User accounts** — save enquiries, view booking/enquiry history
 - **Admin CMS** — non-technical staff can add/edit hotels, cruises, packages, offers
 - **Reviews/Testimonials** — expand beyond the 3 static testimonials to a real, growing review system
 - **Payment/booking checkout** — for products the agency can fully digitize (e.g., staycations, packages with fixed pricing)
 - **Blog/Travel Guide** — supports SEO (footer already references "Travel Guide")
-

5. User Stories

Traveler / Guest User

- As a traveler, I want to search hotels by destination and dates, so I can see options that fit my trip.
- As a traveler, I want to filter cruises by type (luxury, international, scenic), so I don't have to scroll through irrelevant options.
- As a traveler, I want to submit an enquiry with my travel dates and contact info, so an agent can send me a personalized quote without me having to call first.
- As a traveler, I want to click "WhatsApp" on a specific hotel/package and have my message pre-filled with what I'm interested in, so I don't have to explain from scratch.
- As a traveler, I want to see current offers with clear validity dates, so I know if a deal is still available.
- As a traveler, I want to view a package's full inclusions (flight, hotel, meals, activities) before enquiring, so I understand what I'm paying for.
- As a returning traveler, I want to log in and see my past enquiries/bookings, so I don't lose track of my trip plans.

Admin / Travel Agent

- As an agent, I want to receive enquiry submissions instantly (email/dashboard/WhatsApp notification), so I can respond quickly and not lose the lead.
- As an admin, I want to add or update a hotel/cruise/package listing without needing a developer, so content stays current.
- As an admin, I want to create and expire offers with a start/end date, so outdated deals don't stay live and damage trust.
- As an admin, I want to see which pages/products generate the most enquiries, so I know what to promote.

Business Owner

- As the business owner, I want to track how many enquiries convert to bookings, so I can measure ROI on the website.
 - As the business owner, I want the site to reflect a premium, trustworthy brand, so it supports the "luxury/curated" positioning against mass-market OTAs.
-

6. MVP Scope (Version 1)

The MVP should convert the current static site into a **lead-generation engine** with structured browsing and enquiry capture — not a full self-serve booking/payment platform. This is achievable, testable, and matches the "curated agency" positioning better than a rushed booking engine.

In scope for v1

Feature	Detail
Structured listings (read-only)	Real (not placeholder) listings for Hotels, Cruises, Staycations, and Packages with photos, description, price range, and inclusions — manually entered by admin
Basic search & filter	Destination/category filters for each vertical (no live availability/pricing engine needed)
Enquiry / "Get a Quote" form	On every listing + a general enquiry page; captures name, phone, email, dates, pax, notes
WhatsApp click-to-chat, pre-filled per listing	Extend existing WhatsApp integration to be contextual
Offers page with admin-manageable content	Simple CMS fields: title, description, discount, valid-from/valid-to, applies-to
Admin dashboard / CMS	Add/edit/remove listings and offers; view submitted enquiries
Email/notification on new enquiry	Auto-email to agency + optional auto-confirmation to customer
Mobile-responsive design	Majority of travel research happens on mobile
Contact/About pages retained & polished	Already exist; keep and refine
Basic analytics	Page views, enquiry submissions by vertical/page (e.g., GA4)

Explicitly out of scope for v1 (see Section 8)

Live flight/hotel GDS integration, online payment/checkout, user accounts, reviews system, multi-agent CRM, loyalty program.

Rationale: Flights and Cruises especially are hard to sell as instant self-serve bookings without GDS/supplier integrations (costly, slow to build, and travel agencies commonly still close these deals via a human agent anyway). An enquiry-first MVP lets the business start converting web traffic into leads within one build cycle, and payment/booking can be added once there's proven demand and clear unit economics per vertical.

7. Success Metrics

Primary (business impact)

- Number of qualified enquiries/quote requests submitted per month
- Enquiry-to-booking conversion rate (tracked manually by agents initially)
- WhatsApp click-through rate from listing pages

Secondary (product health)

- Website traffic by source (organic, paid, referral) and by vertical page (Hotels vs Flights vs Cruises vs Staycation vs Packages)
- Bounce rate on listing pages
- Average time-to-first-response on enquiries (agent SLA)
- Offers page engagement (views → enquiries)
- Mobile vs desktop usage split
- Search/filter usage rate (are people using filters, or bouncing before?)

Leading indicators to watch pre-launch

- % of listings with complete content (photos, price range, description) — data completeness gates a good launch
 - Form completion rate (started vs. submitted) — flags friction in the enquiry form
-

8. Features to Avoid in Version 1

These are reasonable long-term ideas but would slow down or dilute the MVP; explicitly deferring them keeps scope honest:

1. **Live flight booking / GDS or airline API integration** — expensive, complex, and typically still agent-mediated even at competing agencies; start with enquiry-based flights.
2. **Online payment gateway / full self-serve checkout** — introduces PCI compliance, refund/cancellation policy complexity, and cruise/package pricing is rarely fixed

enough for instant checkout in v1. The existing WooCommerce cart shell should be hidden/disabled until this is deliberately built.

3. **User account system with saved trips/wishlists** — adds auth, security, and data-privacy overhead before there's proof people want it; enquiries can be tracked by agents without customer logins.
 4. **Real-time hotel/cruise availability & dynamic pricing engine** — requires supplier integrations (Hotelbeds, TravelBoutiqueOnline, cruise line APIs); manually curated listings are sufficient to validate demand first.
 5. **AI trip planner / chatbot itinerary builder** — trendy but not core to converting existing traffic; revisit after MVP metrics are in.
 6. **Multi-language / multi-currency support** — adds real complexity; only prioritize if data shows meaningful international traffic.
 7. **Loyalty/rewards points program** — needs booking volume and repeat-customer data that doesn't exist yet.
 8. **Public review/rating system** — needs moderation tooling and a critical mass of customers to avoid looking empty or fake; keep curated testimonials (as today) for v1.
 9. **Group booking / corporate portal** — a distinct workflow (multi-traveler, invoicing, approvals) better suited to a v2 after core consumer flow is validated.
 10. **Native mobile app** — a responsive website is sufficient at this stage; app investment should follow proven traffic and retention.
-

9. Open Questions for Stakeholder Input

- Which verticals (Hotels, Cruises, Staycations, Packages) have the highest current manual booking volume today — should content/listing effort be weighted there first?
 - Is there an existing CRM or spreadsheet the agency uses to track enquiries, to integrate with or migrate from?
 - What's the realistic timeline/budget for a future payment integration, to sequence v2 planning?
 - Who will be responsible for keeping listings and offers updated post-launch (in-house admin vs. developer-dependent)?
-

This PRD should be treated as a living document — the MVP scope in Section 6 is the recommended baseline for sign-off; Sections 4 and 8 provide the roadmap for what comes after.
